© 2017 Capula Limited
Registered in England No. 953504 Registered Office: Orion House Stone

Capula is the go-to industrial systems integrator for process, manufacturing, power, utilities and engineering businesses throughout the UK.

We're experts in industrial control, instrumentation and automation. We develop, engineer and implement advanced technologies that bring you the knowledge and capabilities to audit, analyse and derive business intelligence and value from disparate or complex production and process systems.

Our expertise, combined with an extensive portfolio of technologies from leading vendors, enables us to help your business exploit the growing potential from industrial digitisation. If you're an early adopter of Industry 4.0 or have an Industrial Internet of Things (IIoT) project in mind, we can develop solutions that deliver transformative change.

Our depth of applications knowledge, embodied in our highly skilled, experienced and committed team, truly sets us apart. We've decades of experience partnering with customers large and small, working on some of the most complex and distributed systems found across the industrial sector. Just as importantly, our continuous investment in apprenticeships and training means that we're developing the next generation of engineers, with the hardware and software skills to ensure a level of service that is unsurpassed.

With offices nationwide, we're able to offer local support to your business. We also have the backing that comes with being part of the Imtech group, a large, independently owned and managed technical services provider.

Power Transmission

We are the single largest supplier of substation control systems for the electricity network across England and Wales and have been implementing advanced substation control technologies for over 25 years.

Water

We have made significant contributions to programmes being undertaken by major utility companies and our systems support the delivery of clean water to 20 million people in the UK.

Nuclear

With more than 40 years' experience in the Nuclear industry, we have a clear understanding of the stringent security, safety and quality protocols required. We support the full life cycle of nuclear energy from new build to waste management and decommissioning.

Process Industries

Our domain knowledge is being applied to complex projects in a variety of industrial landscapes and helps our clients improve productivity and achieve cost efficiencies.

Oil and Gas

Our technologies have provided tangible benefits for clients operating in oil and gas including, improved regulatory compliance, enhanced loss prevention and reduced exposure to litigation.

Energy Distribution

We are uniquely positioned to assist companies in the transition to new operating models in this arena as we have been involved in electricity generation, transmission and distribution since the early 1980s.

Power Generation

Our control systems operate some of the UK's largest power generation plants and efficiently meet the energy needs of over 36 million people.

Systems

- SCADA and telemetry
- IMPERIUM Substation automation
- Remote monitoring
- Boiler control
- Materials tracking
- PLC and RTU control
- Safety critical
- Distributed control

Service

- Support contracts
- Upgrades and migration
- Technical audits
- Cyber security
- Panel build
- Product repair
- Consultancy
- Health assessment
- Training

Renewables

We offer an extensive portfolio of solutions to clients operating in the hydro and wind arena and we work collaboratively with major clients in the energy from waste sector.

Software

- OPUS Network visibility
- OPUS Building performance management
- OPUS Predictive analytics
- Data historians
- IoT solutions
